## SOL PLAATJE INTEGRATED BULK WATER SUPPLY INTERVENTION

### TO ALL RESIDENTS

#### 1. Introduction

**This is an Emergency Water Interruption, due to excessive leaks.**

The purpose of the scheduled water interruption is to effect repairs to all major leaks on the **965mm and 600mm** bulk water pipelines, and at Riverton WPW pump station, which directly affects the water levels at the reservoirs. The leak next to the HLP is threatening the integrity of the new pump station.

The interruption will also present an opportunity to incorporate the repair of major leaks on the **reticulation network**.

Leak on the Rising main manifold, at **Riverton WPW**, shall be repaired as well cleaning of Clarifier #6 in **Riverton WPW**.

Repair of leaks at **Newton Reservoir Complex** will also be attended to during the scheduled interruption, if time allows.

At the same time, bulk water meter insertion probes will also be installed on the 600 and 900mm bulk pipelines to enable water loss measurements on the bulk water supply.

#### 2. Shut Down

The water interruption will take place on Wednesday, 11 August 2023 at 18:00 until Monday 14 August 2023 23:00. This will provide the Municipality with enough time to fully drain the affected pipe sections, undertake the repairs and restore the water supply to all communities.

This exercise marks the beginning of a huge improvement in the water quality and water supply assurance to the Municipality for the future.

Further information regarding the placement of roaming water tankers and JOJO Tanks, which will be placed in various wards will be communicated.
