Q018/2024/2025 – CONSTRUCT CONCRETE SLAB AT KENILWORTH & PHUTANANG CEMETERIES FOR THE STEEL CONTAINERS ABLUTION BLOCKS

- THIS BID WILL NOT BE CONSIDERED IF THIS PAGE IS NOT FULLY COMPLETED.
- PRICES ALTERED BY MEANS OF CORRECTION FLUID WILL NOT BE CONSIDERED
- THE QUOTE WILL BE EVALUATED ON THE TOTAL PRICE AND NOT PER LINE ITEM
- ANY QUOTE WILL NOT NECESSARILY BE ACCEPTED AND THE COUNCIL RESERVES THE RIGHT TO ACCEPT THE WHOLE OR ANY PART OF THE QUOTE.

Specifications

1. Clearing of Site Area (20m x 15m)

The site area, measuring 300 m², will need to be cleared of any vegetation, debris, or obstructions to prepare it for subsequent construction activities. Clearing the site is essential for ensuring a smooth and safe working environment. It allows for accurate surveying and setting out and provides a clean slate for excavation and construction activities. Clearing activities must comply with local environmental regulations, guidelines, and by-laws.

2. Surveying and Setting Out

Professional surveying and setting out will be conducted to accurately mark the boundaries and levels for the construction of the concrete slab.

- Surveying must be conducted by a qualified surveyor.
- All measurements and markings must be verified before proceeding with excavation.

3. Excavation for Sub-base

Excavation must be performed to prepare the area for the sub-base layer. The excavation must be to a depth that allows for the placement of the 150 mm sub-base material.

Proper excavation ensures that the sub-base material is laid on a stable foundation, which is crucial for the durability and stability of the concrete slab.

- Excavation must be conducted to the specified depth and dimensions.
- The excavated area must be free of loose soil and adequately compacted.

4. Construction of Formwork

Formwork must be constructed around the perimeter of the slab area to contain the concrete during pouring and ensure it sets in the desired shape and dimensions.

Formwork is necessary to provide a mold for the concrete slab, ensuring it cures to the correct dimensions and structural integrity.

- Formwork must be constructed from durable materials capable of withstanding the weight and pressure of the wet concrete.
- Formwork must be properly aligned and secured to prevent any movement during concrete pouring.

5. Construction of Concrete Slab

The concrete slab must be constructed with a dimension of 15m x 10m, using 25 MPa concrete, 100mm thick, reinforced with mesh 193, and with joints every 3 meters.

The concrete slab serves as the foundation for the ablution blocks. It must be strong and durable to support the weight and usage demands of the structure placed on it.

- Concrete mix design must be submitted for approval if mixed on-site.
- Ready mix concrete must be delivered within the specified period.
- Reinforcing mesh must be placed according to the specified layout.
- Joints must be constructed every 3 meters to control cracking.

6. Sub-base Preparation

A 150 mm thick layer of imported G5 material, compacted to 95% Modified AASHTO, must be placed and compacted to serve as the sub-base for the concrete slab.

The sub-base provides a stable and level foundation for the concrete slab, preventing settlement and ensuring long-term performance.

- G5 material must be sourced from a reliable supplier and meet the specified standards.
- Compaction must be verified through density tests before concrete is poured.

7. Concrete Slump Test

A slump test must be performed on-site before pouring the concrete to ensure the mix has the correct consistency.

The slump test ensures that the concrete mix is workable and has the correct water-cement ratio for optimal performance.

• The test must be conducted in accordance with standard procedures, and results must be documented.

MQD 9 CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging). Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

Includes price quotations, advertised competitive bids, limited bids and proposals.

Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
